---

AI Engineer with 5+ years designing and delivering production-grade Gen AI applications across cloud and enterprise environments — from architecture and prototyping through deployment and production operations. Specialized in building agentic AI systems and retrieval-augmented generation (RAG) workflows for enterprise document management, including document ingestion, processing, classification, and retrieval, while maintaining responsible AI practices and data security/compliance standards. Proficient in Python and React, with strong grounding in Gen AI frameworks (LangChain, LangGraph), prompt and context engineering, and software engineering best practices across the development lifecycle. Experienced integrating AI platforms with enterprise SaaS ecosystems via secure API-driven architectures, and working independently with general guidance to deliver scalable, reliable solutions adopted across large enterprise user bases.

## WORK EXPERIENCE

| <ul style="list-style-type: none"><li>• <b>Developed Gen AI-based applications and frameworks</b> for cloud environments — architected Genpact AP Trace, an agentic AI invoice-duplicate-detection platform integrating LLMs, RAG, and agent-based workflows; flagged duplicates across 10,000+ invoices/month, reducing financial leakage risk by 15–20%.</li><li>• <b>Built secure, scalable Gen AI platforms for enterprise document management</b> — implemented end-to-end workflows for document ingestion, processing, classification, and retrieval (Azure OpenAI, Azure Document Intelligence), achieving 90%+ extraction accuracy across 500+ samples.</li><li>• <b>Implemented RAG architectures and agentic systems</b>, maintaining responsible AI practices and data security/compliance standards while reducing hallucination in production AI workflows.</li><li>• <b>Designed multi-agent orchestration frameworks</b> (LangChain, LangGraph, Azure OpenAI) to automate vendor onboarding and compliance validation, applying prompt and context engineering — cutting manual processing effort by 40%.</li><li>• <b>Owned application delivery end-to-end</b> — coding, testing, debugging, deployment — for a Text-to-SQL AI application (Python, React) adopted by 200+ users across 10+ regions, reducing manual SQL dependency by 60%.</li><li>• <b>Managed automated document-processing pipelines with monitoring and alerting</b>, troubleshooting production issues and contributing to root-cause analysis for model/extraction quality regressions.</li><li>• <b>Designed reusable agentic AI workflow orchestration frameworks</b> for region-specific business logic, accelerating onboarding by ~35% and cutting rollout time from 6 weeks to under 4; integrated enterprise platforms (ServiceNow, Salesforce) via secure REST APIs.</li><li>• <b>Contributed to containerized application deployments and CI/CD practices</b>, working independently with general guidance across Python-centric, cloud (Azure) environments to deliver secure, compliant Gen AI solutions.</li></ul> |                                                             |
| <b>CGI</b><br>(Software Engineer)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <b>Bangalore, Karnataka</b><br><b>June 2021 – June 2024</b> |
| <ul style="list-style-type: none"><li>• <b>Owned the full software development lifecycle</b> — design, coding, testing, debugging, and deployment — for cloud-native enterprise applications (React.js, Python — Flask/FastAPI), supporting 200+ enterprise users; applied software engineering best practices to translate business challenges into scalable, secure, and reliable software.</li><li>• <b>Designed REST API architectures</b> (FastAPI, PostgreSQL, Redis) grounded in scalability, security, and reliability principles, reducing average API response time by 35%.</li><li>• <b>Built Python-based automation pipelines</b>, replacing manual, legacy enterprise processes with workflow automation, reducing processing effort by 40–50% and eliminating 15–20 hrs/week of manual operational work.</li><li>• <b>Developed reusable React component libraries, coding standards, and reusable assets/templates</b>, improving engineering efficiency and consistency across solutions — cutting feature delivery time by 30%.</li><li>• <b>Built Selenium-based process automation</b> for critical enterprise workflows, reducing failures by 30%; acted as a technical interface to business stakeholders for requirements gathering, demos, and technical documentation.</li><li>• <b>Operated as a fully independent practitioner across the full application lifecycle</b> with minimal supervision — requirements, architecture, build, and deployment — demonstrating adaptability across legacy/antiquated systems and ambiguous, high-impact environments.</li><li>• Worked across <b>Linux and Windows environments</b> using command-line tooling for builds, deployments, and debugging; collaborated cross-functionally with stakeholders to translate evolving operational needs into functional features.</li></ul>                                                                                                                                                                                                                                                                  |                                                             |

EDUCATION

| Qualification          | Institute                   | CGPA / Percentage | Time of Completion      |
|------------------------|-----------------------------|-------------------|-------------------------|
| Bachelor of Technology | NIT Jalandhar               | CGPA – 7.92/10    | August 2017 – May 2021  |
| Class XII              | GGN Public School, Ludhiana | 91.8 %            | April 2016 – March 2017 |
| Class X                | GGN Public School, Ludhiana | CGPA – 10/10      | April 2014 – March 2015 |

TECHNICAL SKILLS

- **AI / GenAI / Agentic AI:** LLMs, Generative AI, Agentic AI, Multi-Agent Orchestration, LangChain, LangGraph, RAG, Prompt Engineering, Azure OpenAI, Azure Document Intelligence, Vector Databases (FAISS/Pinecone/ChromaDB), Function/Tool Calling, Scikit-Learn, TensorFlow
- **Languages:** Python, JavaScript, SQL, C++
- **Frontend:** React.js, Redux Toolkit, MUI (Material-UI), Tailwind CSS, HTML5/CSS3
- **Backend & APIs:** FastAPI, Flask, REST APIs, WebSockets, Microservices Architecture
- **Databases & Caching:** PostgreSQL, Redis, MongoDB
- **Cloud & DevOps:** Azure (App Service, Functions, OpenAI Service), Docker, Git, CI/CD
- **Data & Visualization:** NumPy, Pandas, Matplotlib, Seaborn
- **Automation & Testing:** Selenium, PyTest
- **CS Fundamentals:** Data Structures & Algorithms, Object-Oriented Programming, System Design

PERSONAL PROJECT

Agentic Medical Appointments Processing – [DEMO](#)

The system simulates how medical appointments move through an AI-orchestrated pipeline:

- **Orchestrator** — A master agent reads appointments from a database and ranks them by dynamic priority (client, specialty, notes).
- **Stage agents** — Each appointment passes through 6 configurable stages (e.g. Intake, Insurance, Clinical Review). Each stage is an LLM-backed agent that returns a standardized outcome.
- **Exception queue** — If a stage returns Escalate, the case goes to a human concierge.
- **Human resolution** — A human resolves the issue; the appointment becomes Cleared and the workflow resumes automatically.

Tech Stack Used – React, Vite, FastAPI, Python, SQLite, LangChain, LangGraph, Hugging Face LLM
