AI Engineer with 5+ years designing and delivering production-grade Gen AI applications across cloud and enterprise environments — from architecture and prototyping through deployment and production operations. Specialized in building agentic AI systems and retrieval-augmented generation (RAG) workflows for enterprise document management, including document ingestion, processing, classification, and retrieval, while maintaining responsible AI practices and data security/compliance standards. Proficient in Python and React, with strong grounding in Gen AI frameworks (LangChain, LangGraph), prompt and context engineering, and software engineering best practices across the development lifecycle. Experienced integrating AI platforms with enterprise SaaS ecosystems via secure API-driven architectures, and working independently with general guidance to deliver scalable, reliable solutions adopted across large enterprise user bases.

WORK EXPERIENCE

Genpact (Sr. SW Engineer – Agentic Developer)	Bangalore, Karnataka July 2024 - Present
• Developed agent-based applications and Gen AI frameworks — architected Genpact AP Trace, an agentic AI invoice-duplicate-detection platform integrating LLMs, RAG, and multi-agent orchestration; flagged duplicates across 10,000+ invoices/month, reducing financial leakage risk by 15–20%. • Built and orchestrated multi-agent workflows using agent orchestration frameworks (LangChain, LangGraph, Azure OpenAI) to automate vendor onboarding and compliance validation, applying prompt engineering, context engineering, and AI orchestration concepts — cutting manual processing effort by 40%. • Implemented RAG architectures and agentic systems to ground LLM outputs in enterprise document data, applying responsible AI practices, data security, and compliance standards while reducing hallucination in production workflows. • Designed and built a Text-to-SQL AI application (Python, React) — owned development end-to-end including coding, testing, debugging, and technical documentation — adopted by 200+ users across 10+ regions, reducing manual SQL dependency by 60%. • Built GenAI-powered document processing pipelines (Azure OpenAI, Azure Document Intelligence) achieving 90%+ extraction accuracy across 500+ samples, converting a recurring operational issue into a scalable, engineered automation solution. • Monitored automated pipelines and contributed to root-cause analysis for model/extraction quality regressions, applying operational automation and reliability practices to maintain production AI system health. • Integrated enterprise platforms (ServiceNow, Salesforce) via secure REST APIs and source-controlled codebases, designing reusable workflow artifacts and agentic AI templates for region-specific business logic — accelerated onboarding by ~35%, cutting rollout time from 6 weeks to under 4. • Contributed to CI/CD practices and containerized deployments, working independently with general guidance across Python-centric, cloud (Azure) environments to deliver secure, production-ready Gen AI solutions; collaborated across global, cross-functional teams to translate technical concepts for non-technical stakeholders.	
CGI (Software Engineer)	Bangalore, Karnataka June 2021 – June 2024
• Developed maintainable code, automations, and workflow-based solutions end-to-end — design, coding, testing, debugging, and deployment — for cloud-native enterprise applications (React.js, Python — Flask/FastAPI), supporting 200+ enterprise users. • Designed REST API architectures (FastAPI, PostgreSQL, Redis) grounded in scalability, security, and reliability principles, reducing average API response time by 35%. • Built Python-based automations and integrations, converting recurring operational issues into engineered, maintainable workflow solutions that replaced manual, legacy enterprise processes — reducing processing effort by 40–50% and eliminating 15–20 hrs/week of manual work. • Developed reusable React component libraries and coding standards, improving engineering efficiency and consistency across solutions — cutting feature delivery time by 30%. • Built Selenium-based automation scripts for critical enterprise workflows, reducing failures by 30%; maintained technical documentation and used source control for collaborative development and debugging. • Operated as a fully independent practitioner across the full application lifecycle with minimal supervision — requirements, architecture, build, and deployment — demonstrating strong analytical and problem-solving skills across legacy/antiquated systems and ambiguous environments. • Acted as a technical interface to business stakeholders, leading requirements gathering, demos, and clear communication of technical concepts to non-technical audiences across global, cross-functional teams. • Worked across Linux and Windows environments using command-line scripting (Python, Bash-equivalent tooling) for builds, deployments, and debugging.	

EDUCATION

Qualification	Institute	CGPA / Percentage	Time of Completion
Bachelor of Technology	NIT Jalandhar	CGPA – 7.92/10	August 2017 – May 2021
Class XII	GGN Public School, Ludhiana	91.8 %	April 2016 – March 2017
Class X	GGN Public School, Ludhiana	CGPA – 10/10	April 2014 – March 2015

TECHNICAL SKILLS

- **AI / GenAI / Agentic AI:** LLMs, Generative AI, Agentic AI, Multi-Agent Orchestration, LangChain, LangGraph, RAG, Prompt Engineering, Azure OpenAI, Azure Document Intelligence, Vector Databases (FAISS/Pinecone/ChromaDB), Function/Tool Calling, Scikit-Learn, TensorFlow
- **Languages:** Python, JavaScript, SQL, C++
- **Frontend:** React.js, Redux Toolkit, MUI (Material-UI), Tailwind CSS, HTML5/CSS3
- **Backend & APIs:** FastAPI, Flask, REST APIs, WebSockets, Microservices Architecture
- **Databases & Caching:** PostgreSQL, Redis, MongoDB
- **Cloud & DevOps:** Azure (App Service, Functions, OpenAI Service), Docker, Git, CI/CD
- **Data & Visualization:** NumPy, Pandas, Matplotlib, Seaborn
- **Automation & Testing:** Selenium, PyTest
- **CS Fundamentals:** Data Structures & Algorithms, Object-Oriented Programming, System Design

PERSONAL PROJECT

Agentic Medical Appointments Processing – [DEMO](#)

The system simulates how medical appointments move through an AI-orchestrated pipeline:

- **Orchestrator** — A master agent reads appointments from a database and ranks them by dynamic priority (client, specialty, notes).
- **Stage agents** — Each appointment passes through 6 configurable stages (e.g. Intake, Insurance, Clinical Review). Each stage is an LLM-backed agent that returns a standardized outcome.
- **Exception queue** — If a stage returns Escalate, the case goes to a human concierge.
- **Human resolution** — A human resolves the issue; the appointment becomes Cleared and the workflow resumes automatically.

Tech Stack Used – React, Vite, FastAPI, Python, SQLite, LangChain, LangGraph, Hugging Face LLM

CERTIFICATIONS

- [Document AI: From OCR to Agentic Doc Extraction](#) – May 2026
- [Databricks Certified Generative AI Engineer Associate](#)– July 2025
