GAI Engineer with 5+ years delivering production-grade GenAI and automation systems end-to-end — from solution architecture through deployment. Specialized in designing agentic AI workflows and natural-language data-querying tools that scale across large enterprise user bases and multiple regions. Skilled in connecting AI platforms with enterprise software ecosystems through API integrations, with deep expertise in LLM application development, prompt and context design, and modern orchestration frameworks. Combines this with strong full-stack engineering capability (React, Python) to turn business problems into working, adopted solutions — consistently improving rollout speed and operational efficiency for cross-functional teams.

WORK EXPERIENCE

- | | |
|--|---|
| Genpact
(Senior AI Agent Engineer – Forward Deployed Engineer) | Bangalore, Karnataka
July 2024 - Present |
| <ul style="list-style-type: none">• Owned full-stack lifecycle delivery (Vision-Lock → Solution Design/Architecture → Build → Tuning → Launch) of Genpact AP Trace, an agentic AI invoice-duplicate-detection platform — architected multi-agent logic flagging duplicates across 10,000+ invoices/month, reducing financial leakage risk by 15–20%.• Architected multi-agent orchestration frameworks (LangGraph, Azure OpenAI) applying strong prompt engineering, context engineering, and data modeling practices to automate vendor onboarding and compliance validation, cutting manual effort by 40%.• Designed and delivered a Text-to-SQL AI solution, acting as a trusted advisor to non-technical business stakeholders — drove adoption across 200+ users in 10+ regions, reduced manual SQL dependency by 60%; created solution proposals, architecture diagrams, and demos tailored to technical and business audiences, and upskilled business teams to self-serve.• Built GenAI-powered document intelligence pipelines (Azure OpenAI, Azure Document Intelligence) achieving 90%+ extraction accuracy across 500+ samples — translated complex customer/business challenges into scalable, reliable AI solutions.• Architected reusable, configurable agentic AI templates/frameworks for region-specific business logic, generalizing solutions for the broader team and accelerating onboarding by ~35%, cutting rollout time from 6 weeks to under 4.• Integrated enterprise platforms (ServiceNow, Salesforce) via REST API-driven architectures, improving system reliability and reducing integration failure rate by 25%; documented integration patterns and rollout plans (akin to SOWs) for reuse.• Partnered cross-functionally with engineering, product, and business teams — synthesizing customer feedback to influence the technical roadmap and platform evolution; operated independently across diverse, ambiguous problem scopes.• Worked extensively in Linux/cloud (Azure) environments, using command-line tooling for deployment, debugging, and pipeline management.• Implemented retrieval-augmented generation (RAG) techniques to ground LLM responses in enterprise document data, improving output accuracy and reducing hallucination in production AI workflows. | |
| CGI
(Software Engineer) | Bangalore, Karnataka
June 2021 – June 2024 |
| <ul style="list-style-type: none">• Owned full-stack ownership of internal automation tools and operational portals end-to-end (React.js, Python — Flask/FastAPI), supporting 200+ enterprise users; led solution design and architecture translating business process challenges into working software.• Designed scalable REST API architectures (FastAPI, PostgreSQL, Redis) with strong focus on API-based systems integration, reducing average response time by 35%.• Built Python-based automation and iPaaS-style workflows (comparable to Workato/Azure Functions/AWS Lambda-style automation) replacing manual, legacy enterprise processes — reduced processing effort by 40–50%, eliminating 15–20 hrs/week of manual work.• Developed reusable React component libraries and coding standards, generalizing solutions into reusable templates and cutting feature delivery time by 30%.• Built Selenium-based process automation for critical workflows, reducing failures by 30%; collaborated directly with business stakeholders for requirements gathering, demos, and technical documentation.• Operated as a fully independent practitioner across the project lifecycle — requirements, architecture, build, deployment — frequently navigating legacy/antiquated systems, demonstrating adaptability across technical domains.• Worked across Linux and Windows environments, using command-line tools for builds, deployments, and debugging; maintained strong personal accountability to internal teammates and stakeholders relying on delivered systems.• Collaborated directly with business stakeholders to gather requirements and translate evolving operational needs into functional features, adapting quickly across multiple internal tools and technical domains. | |

EDUCATION

Qualification	Institute	CGPA / Percentage	Time of Completion
Bachelor of Technology	NIT Jalandhar	CGPA – 7.92/10	August 2017 – May 2021
Class XII	GGN Public School, Ludhiana	91.8 %	April 2016 – March 2017
Class X	GGN Public School, Ludhiana	CGPA – 10/10	April 2014 – March 2015

TECHNICAL SKILLS

- **AI / GenAI / Agentic AI:** LLMs, Generative AI, Agentic AI, Multi-Agent Orchestration, LangChain, LangGraph, RAG, Prompt Engineering, Azure OpenAI, Azure Document Intelligence, Vector Databases (FAISS/Pinecone/ChromaDB), Function/Tool Calling, Scikit-Learn, TensorFlow
- **Languages:** Python, JavaScript, SQL, C++
- **Frontend:** React.js, Redux Toolkit, MUI (Material-UI), Tailwind CSS, HTML5/CSS3
- **Backend & APIs:** FastAPI, Flask, REST APIs, WebSockets, Microservices Architecture
- **Databases & Caching:** PostgreSQL, Redis, MongoDB
- **Cloud & DevOps:** Azure (App Service, Functions, OpenAI Service), Docker, Git, CI/CD
- **Data & Visualization:** NumPy, Pandas, Matplotlib, Seaborn
- **Automation & Testing:** Selenium, PyTest
- **CS Fundamentals:** Data Structures & Algorithms, Object-Oriented Programming, System Design

PERSONAL PROJECT

Agentic Medical Appointments Processing – [DEMO](#)

The system simulates how medical appointments move through an AI-orchestrated pipeline:

- **Orchestrator** — A master agent reads appointments from a database and ranks them by dynamic priority (client, specialty, notes).
- **Stage agents** — Each appointment passes through 6 configurable stages (e.g. Intake, Insurance, Clinical Review). Each stage is an LLM-backed agent that returns a standardized outcome.
- **Exception queue** — If a stage returns Escalate, the case goes to a human concierge.
- **Human resolution** — A human resolves the issue; the appointment becomes Cleared and the workflow resumes automatically.

Tech Stack Used – React, Vite, FastAPI, Python, SQLite, LangChain, LangGraph, Hugging Face LLM

CERTIFICATIONS

- [Document AI: From OCR to Agentic Doc Extraction](#) – May 2026
- [Databricks Certified Generative AI Engineer Associate](#)– July 2025
